

Single Page Portfolio Website Research

<https://mishunov.me/> Denys Mishunov - developer

This is a very colorful website. There are different cartoon images of Denys that are drawn on the screen as you are viewing it, along with some animations for transitioning between images. The functionality is just social media links and links between the sections of the site. The site says Denys codes, writes and speaks, but it has no projects, papers or articles to show.

<http://johnwong.io/> John Wong - Developer

John Wong's page has a very clean look with a white background and plenty of whitespace. His content is below the fold, where he has one topic on the right side and then projects below and in the middle of the page, then another topic below on the left with more projects listed under it. For his inspiration topic, he has links that each open up a little 'screen' where you can see the project in action. The screen effect is nice, though it would also be nice to have the option to open it in another tab. The 'contact me' is fixed in the right corner.

Inspiration

Here are my random inspirations of work. They may seem meaningless or impractical, but hey, they're just for

gameoflife

matrix

This comes from a small inspiration I got from many ASCII arts on the internet. They somehow reminds me of the code scenes from the movie "Matrix", which was how I got the idea of using the pixel data from a video and convert it into a group of ASCII characters.

<http://www.robinpayot.com/> Robin Payot - developer

Robin's website is graphically interactive. It has you clicking to access visual areas with links to her portfolio projects. Her graphic effects are quite nice but are not reflected in the projects she is showcasing. Also, there is a unique page design for each project link, which seems like a lot of overhead. There is some effect in moving your mouse around and on the graphics. It is a bit difficult to read the projects within the graphical layout.

My view

I would say out of the three I like John Wong's site the best. The clean style means you don't get distracted by random elements. The links to his projects are well placed and the projects are easy to view. I do like the color and animation on Denys' site, but I don't know where he would put in projects or how to fit them in style-wise, yet I also feel that without showing any projects it's hard to judge whether he has any inspiration besides that of his own site. Robyn's site seemed to distract from the projects. It is good to show her animation talent, but if she wants people to know what she has done for sites, it's not the best way to showcase it.
